

Power the apps that power your business

Your critical apps, performing without compromise. That's 5G Mobile Network Slice - Business App Management.

Key takeaways

- Power your go-to apps with a fast, reliable 5G mobile network slice
- Choose from a wide range of business-critical apps
- Leverage your existing mobile device management (MDM) platforms for no-code deployment

Are you flipping a coin for connectivity?

Your mobile apps aren't a nice-to-have. They're essential tools that drive your business forward. Productivity, sales, customer relationship management (CRM), fleet management, construction, healthcare – important business functions like these can slow to a stop when apps lag.

Right now, your apps are likely competing for the same bandwidth. When the network gets congested, performance becomes a coin flip: Business-critical apps might work, or they might lag or drop out completely.

Giving your priority apps priority performance

You don't have to leave app connectivity up to chance. Verizon 5G Mobile Network Slice - Business App Management lets you assign 5G network slices to your essential mobile apps. The result: high-priority, low-latency connectivity for the apps that matter most, even when the network is under the most pressure.

You can manage it all on your existing MDM platform. Simply assign 5G slices to the apps you choose, assign users to those apps and watch your team members do their best work on the go.

Simple to deploy, built to perform

No coding required

Apply 5G network slices to your chosen apps through your current MDM solution – no coding or complex configuration needed. That means less strain on your IT resources and a faster path to activation. Don't have an MDM platform? We can set you up with one.

Flexibility, scalability and choice

Map your business's critical apps directly to a network slice. Access is assigned per user, so you can choose which apps go to which employees – allowing you to optimize your investment and scale as your needs grow.

Comprehensive app options

Choose from a wide variety of industry-specific business apps – productivity, sales, CRM, fleet management, construction, healthcare and beyond – to support your mobile workers.

Reliable priority performance

Our nationwide network slices offer priority performance for critical apps, even for employees on the move. Outside of 5G standalone coverage areas, apps will continue to work on the broader Verizon network.

Unlock new possibilities

5G Mobile Network Slice - Business App Management can be tailored to your business needs. Take a closer look at three use cases.

Manage fleets and logistics.

Help keep track of your vehicles and assets, reduce GPS dispatch delays, and resolve mapping connectivity issues on the road.

Empower workers in the field.

Support stable, high-quality videoconference calls for remote and field employees. Plus, provide reliable access to the apps they need to be productive.

Support patients from nearly anywhere.

Get speed, reliability and low-latency performance for patient care apps and critical telemedicine calls.

#1 Powered by America's most reliable 5G network¹

Why Verizon?

Configure connectivity around how you work.

We're expanding the 5G network slice beyond provider-locked apps, putting the power in the hands of those who need it most: the mobile workers running business-critical apps in the field.

Let's give your apps a power-up.

Reach out to your Verizon Account Representative to get ultrafast, high-performance connectivity for your go-to apps today.

1. Based on RootMetrics® United States RootScore® Report: 1H 2026. Tested with best commercially available smartphones on three national mobile networks across all available network types. Your experiences may vary. RootMetrics rankings are not an endorsement of Verizon.
