

With the right tools to manage mobility, you're ready

Verizon MDM simplifies mobility management.

An easier way to manage mobility.

Integrating mobile devices and applications into your everyday workspaces is a great way to give your employees the flexibility to work anytime, virtually anywhere. But it can also create more challenges for your IT team. To help ensure you are reaping all the benefits mobility can bring to your business—and keeping your devices operating at their best—you need an easy way to manage it all.

To help bring continuity to your business and streamline IT operations, Verizon Mobile Device Management (MDM) enables broadband hotspot management and Unified Endpoint Management services. As your mobile workspace and IT needs continue to grow and change, Verizon MDM evolves too, bringing new services and features to your interface to provide a reliable and innovative experience. All to help you deliver greater power and flexibility to your operations while simplifying management for IT.

Experience even more business benefits.

Using Verizon MDM can help you to:

- Enable mobile device freedom, maintain productivity and increase employee satisfaction
- Reduce the cost of supporting mobile assets
- Enhance overall application and performance management
- Secure corporate devices and prevent unauthorized access
- Address changing business needs with a solution that's continually updating support of new services, devices and features

Go beyond ordinary MDM.

Verizon MDM is a unique and comprehensive solution to fit your needs, with:

Single user interface

Experience a single, unified portal accessible 24/7

Unified Endpoint Management (UEM)

Expand MDM capabilities to manage, configure and protect mobile devices running Android, Apple iOS, macOS or Microsoft Windows

Broadband hotspot management

Manage security profiles and settings on selected Jetpack and USB devices

Location services

Locate devices whether or not they have GPS capability

Seamless device enrollment

Empower IT managers to remotely provision devices and securely configure policies via an interface that is compatible with Android Zero Touch, Apple Business Manager and Samsung Knox Mobile Enrollment

Unified Endpoint Management (UEM) + AI Assistant

Take full advantage of UEM features with the AI Assistant, a genAI chat-based tool that enables conversational text so users can ask questions about solution features and how to implement complex workflows

Easy endpoint management, all in one place.

Verizon MDM also allows IT managers to remotely manage and lock down smartphones, tablets and PCs to configurations that support employees' ability to focus on the job.

Broadband hotspot management allows IT managers to manage Jetpack mobile hotspot devices and USB devices over-the-air, to help secure corporate assets. All these capabilities are housed within a single portal in the Verizon MDM centralized interface.

Benefits

- Improve the security of your employee devices, as well as enhance your application risk management capabilities
- Can help end user satisfaction and decrease employee technical support needs
- Find lost devices by using opt-in Location Services
- Can help IT productivity by streamlining device management processes, as IT managers can remotely provision policies without ever touching an end user device
- Configure security settings remotely, restrict device connections, and prevent end users from changing settings
- Remotely define and enforce device policies for all device types, to promote regulatory and corporate compliance
- Group devices and apply policies based on departments, locations or roles, allowing IT managers flexibility in setting permissions based on role
- Support automatic device enrollment in conjunction with identity provider solutions (such as Microsoft Entra ID®), and also enable seamless handoff between Verizon private 5G/LTE networks and public 5G/LTE networks

Unified Endpoint Management makes it easier for you to:

- Create allow/deny lists to help control the apps that can be installed or managed on devices
- Manage devices by locking them, wiping data or preventing access to specific applications or device functions (such as cameras)
- For Android devices, secure separation of corporate and personal data on devices via containerization

And broadband hotspot management also allows you to:

- Set dynamic limits on data usage
- Support a variety of enterprise grade Jetpack and USB devices
